

Partners

As with any successful venture, the Pennsylvania Educational Technology Expo & Conference relies upon partners to assist in its efforts to further educational technology across the Commonwealth.

Partners are invited to take an active role in the development and management of the conference, including participation at Board meetings and on committees, and are expected to promote PETE & C and its goals throughout the partners' organizations and to share all marketing efforts and materials with PETE & C.

To advance the partners' organizations throughout PETE & C, every effort is made to provide space for the partners to exhibit and/or convene a meeting during the conference. Additionally, partners' logos are used on various PETE & C promotional materials and hyperlinks to the partners' websites are posted at www.peteandc.org.

If your organization's core beliefs are aligned with the purposes^{^a} of PETE & C, a partnership is an invaluable opportunity through a significant forum to maximize your efforts and to leverage the vast resources of the PETE & C members and other partner organizations.

To request that your established, non-profit organization be considered for partnership by the Pete & C Board of Directors, please submit via email the following:

- Organization information (including name, address, phone/fax, and URL),
- Primary contact information (including name, phone number, and email address),
- Description of the organization (including brief history, mission/vision, activities or services provided, staff, and member base),
- Proposed scope of participation, and
- Any additional suggestions that would support a productive partnership.

Requests and questions regarding partnership opportunities should be referred to Amy Munro at amunro@state.pa.us. All requests will be reviewed by the Board within 90 days of submission.

^{^a} The primary purpose of PETE & C is to generate a series of learning opportunities through which educational professionals in a variety of roles can enhance their ability to put technologies to work to serve Pennsylvania's students.
